13.79.1 Macro Definition Documentation

13.79.1.1 GDCM_FUNCTION

```
#define GDCM_FUNCTION "<unknown>"
```

13.79.1.2 gdcmAssertAlwaysMacro

```
#define gdcmAssertAlwaysMacro(  
    arg)
```

Value:

`gdcmAssertMacro` (*arg*)

AssertAlways.

Parameters

<i>arg</i>	argument to test An easy solution to pass also a message is to do: <code>gdcmAssertMacro("my message" && 2 < 3)</code>
------------	---

Referenced by [gdcm::DataElement::GetValue\(\)](#), [gdcm::DataElement::GetValue\(\)](#), [gdcm::BasicOffsetTable::Read\(\)](#), [gdcm::SequenceOfFragments::ReadValue\(\)](#), [gdcm::DataSet::Replace\(\)](#), [gdcm::DataSet::ReplaceEmpty\(\)](#), and [gdcm::VR::Write\(\)](#).

13.79.1.3 gdcmAssertMacro

```
#define gdcmAssertMacro(
    arg)
```

Value:

```
{
    if( !(arg) )
    {
        std::ostringstream osmacro;
        osmacro << "Assert: In " __FILE__ ", line " << __LINE__
            << ", function " << GDCM_FUNCTION
            << "\n\n";
        std::ostream &_os = gdcm::Trace::GetErrorStream();
        _os << osmacro.str() << std::endl;
        assert ( arg );
    }
}
GDCM_NOOP_STATEMENT
```

Assert.

Parameters

<i>arg</i>	argument to test An easy solution to pass also a message is to do: <code>gdcmAssertMacro("my message" && 2 < 3)</code>
------------	---

Referenced by [gdcm::PixelFormat::SetSamplesPerPixel\(\)](#).

13.79.1.4 gdcmDebugMacro

```
#define gdcmDebugMacro(
    msg)
```

Value:

```
{
    if( gdcm::Trace::GetDebugFlag() )
    {
        std::ostringstream osmacro;
        osmacro << "Debug: In " __FILE__ ", line " << __LINE__
            << ", function " << GDCM_FUNCTION << '\n'
            << "Last system error was: "
            << gdcm::System::GetLastSystemError() << '\n' << msg;
        std::ostream &_os = gdcm::Trace::GetDebugStream();
        _os << osmacro.str() << "\n\n" << std::endl;
    }
}
GDCM_NOOP_STATEMENT
```

Debug.

Parameters

<i>msg</i>	message part
------------	--------------

Referenced by [gdcm::OpenSSLCryptoFactory::OpenSSLCryptoFactory\(\)](#), [gdcm::OpenSSLP7CryptoFactory::OpenSSLP7CryptoFactory\(\)](#), [gdcm::Item::Read\(\)](#), [gdcm::SequenceOfItems::Read\(\)](#), [gdcm::VR::Read\(\)](#), [gdcm::SequenceOfFragments::ReadPreValue\(\)](#), and [gdcm::SequenceOfFragments::ReadValue\(\)](#).

13.79.1.5 gdcmErrorMacro

```
#define gdcmErrorMacro(  
    msg)
```

Value:

```
{  
    if( gdcm::Trace::GetErrorFlag() )  
    {  
        std::ostringstream osmacro;  
        osmacro << "Error: In " __FILE__ ", line " << __LINE__  
            << ", function " << GDCM_FUNCTION << '\n'  
            << msg << "\n\n";  
        std::ostream &_os = gdcm::Trace::GetErrorStream();  
        _os << osmacro.str() << std::endl;  
    }  
}  
GDCM_NOOP_STATEMENT
```

Error this is pretty bad, more than just warning It could mean lost of data, something not handle...

Parameters

<i>msg</i>	second message part
------------	---------------------

Referenced by [gdcm::CommandDataSet::Insert\(\)](#), [gdcm::DataSet::Insert\(\)](#), [gdcm::FileMetaInformation::Insert\(\)](#), [gdcm::Item::Read\(\)](#), and [gdcm::Fragment::ReadBacktrack\(\)](#).

13.79.1.6 gdcmWarningMacro

```
#define gdcmWarningMacro(  
    msg)
```

Value:

```
{  
    if( gdcm::Trace::GetWarningFlag() )  
    {  
        std::ostringstream osmacro;  
        osmacro << "Warning: In " __FILE__ ", line " << __LINE__  
            << ", function " << GDCM_FUNCTION << "\n"  
            << msg << "\n\n";  
        std::ostream &_os = gdcm::Trace::GetWarningStream();  
        _os << osmacro.str() << std::endl;  
    }  
}  
GDCM_NOOP_STATEMENT
```

Warning.

Parameters

<i>msg</i>	message part
------------	--------------

Referenced by [gdcm::DataSet::InsertDataElement\(\)](#), [gdcm::Item::Read\(\)](#), [gdcm::SequenceOfItems::Read\(\)](#), [gdcm::Fragment::ReadBacktr](#), [gdcm::Fragment::ReadValue\(\)](#), [gdcm::SequenceOfFragments::ReadValue\(\)](#), [gdcm::OpenSSLP7CryptographicMessageSyntax::SetPassw](#) and [gdcm::Item::Write\(\)](#).

13.199 gdcmDefinedTerms.h File Reference

```
#include "gdcmTypes.h"
```

Include dependency graph for gdcmDefinedTerms.h:

Classes

- class [gdcm::DefinedTerms](#)

Defined Terms are used when the specified explicit Values may be extended by implementors to include additional new Values. These new Values shall be specified in the Conformance Statement (see PS 3.2) and shall not have the same meaning as currently defined Values in this standard. A Data [Element](#) with Defined Terms that does not contain a [Value](#) equivalent to one of the Values currently specified in this standard shall not be considered to have an invalid value. Note: Interpretation [Type](#) ID (4008,0210) is an example of a Data [Element](#) having Defined Terms. It is defined to have a [Value](#) that may be one of the set of standard Values; REPORT or AMENDMENT (see PS 3.3). Because this Data [Element](#) has Defined Terms other Interpretation [Type](#) IDs may be defined by the implementor.

00019 // Also I would like to encapsulate the IsCharacterPrintable thing
00020 // (to avoid printing \0 and other weird characters)
00021 // \todo I still need to implement skipping of group (shadow)
00022 // need to implement longer field to read
00023
00024 /*
00025  * Output:
00026  * For ASCII:
00027  * Typically will look like:
00028  * [ORIGINAL\PRIMARY\OTHER]
00029  * If a non printable character is found: RED and INVERSE is used:
00030  * [
00031  *
00032  * when the VR is not found (file or dict), we check if we can print the output:
00033  * on success ASCII mode is used, on failure the output is printed a series of bytes
00034  *
00035  * Special case when the data element is empty:
00036  * INVERSE < (no value)
00037  *
00038  * retired public element are printed in red and underline
00039  * unknown private element are printed in RED followed by 'UNKNOWN'
00040  *
00041  * Correct VR is printed in green just after the found VR
00042  *
00043  * length of data element is printed in bytes, followed by the VM, a green VM is appended
00044  * if this is not compatible

00013     =====*/
00014 // .NAME vtkGDCMImageReader - read DICOM Image files (Pixel Data)
00015 // .SECTION Description
00016 // vtkGDCMImageReader is a source object that reads some DICOM files
00017 // this reader is single threaded.
00018 // .SECTION Implementation note: when FileLowerLeft is set to on the image is not flipped
00019 // upside down as VTK would expect, use this option only if you know what you are doing.
00020 // .SECTION Implementation note: when reading a series of 2D slices, user is
00021 // expected to provide an ordered list of filenames. No sorting will be applied afterward.
00022 // .SECTION Implementation note: Although 99% of the time the Zspacing as read
00023 // from a tag in a 2D DICOM file should be correct, there has been reports that this
00024 // value can be missing, or incorrect, in which case users are advised to override this
00025 // value using the return value from gdcm::IPPSorter::GetZSpacing() and set it via
00026 // vtkImageChangeInformation on the reader itself.
00027 // .SECTION TODO
00028 // This reader does not handle a series of 3D images, only a single 3D (multi frame) or a
00029 // list of 2D files are supported for now.
00030 // .SECTION TODO
00031 // Did not implement SetFilePattern / SetFilePrefix API, move it to protected section for now.
00032 // .SECTION BUG
00033 // Overlay are assumed to have the same extent as image. Right now if overlay origin is not
00034 // 0,0 the overlay will have an offset...
00035 // Only the very first overlay is loaded at the VTK level, for now (even if there are more than one in the
    file)
00036 // .SECTION DataOrigin
00037 // When the reader is instantiated with FileLowerLeftOn the DataOrigin and Image Position (Patient) are
00038 // identical. But when FileLowerLeft is Off, we have to reorder the Y-line of the image, and thus the
    DataOrigin
00039 // is then translated to the other side of the image.
00040 // .SECTION Spacing
00041 // When reading a 3D volume, the spacing along the Z dimension might be negative (so as to respect
    up-side-down)
00042 // as specified in the Image Orientation (Patient) tag. When Z-spacing is 0, this means the multi-frame
    object
00043 // contains image which do not represent uniform volume.
00044 // .SECTION Warning
00045 // When using vtkGDCMPolyDataReader in conjunction with vtkGDCMImageReader
00046 // it is *required* that FileLowerLeft is set to ON as coordinate system
00047 // would be inconsistent in between the two data structures.
00048 // .SECTION Color Space mapping:
00049 // * VTK_LUMINANCE      <=> MONOCHROME2
00050 // * VTK_LUMINANCE_ALPHA <=> Not supported
00051 // * VTK_RGB            <=> RGB
00052 // * VTK_RGBA          <=> ARGB (deprecated, DICOM 2008)
00053 // * VTK_INVERSE_LUMINANCE <=> MONOCHROME1
00054 // * VTK_LOOKUP_TABLE   <=> PALETTE COLOR
00055 // * VTK_YBR            <=> YBR_FULL
00056 //

00012
00013     =====*/
00014 // .NAME vtkGDCMImageReader2 - read DICOM Image files (Pixel Data)
00015 // .SECTION Description
00016 // vtkGDCMImageReader2 is a source object that reads some DICOM files
00017 // this reader is single threaded.
00018 // .SECTION Implementation note: when FileLowerLeft is set to on the image is not flipped
00019 // upside down as VTK would expect, use this option only if you know what you are doing.
00020 // .SECTION Implementation note: when reading a series of 2D slices, user is
00021 // expected to provide an ordered list of filenames. No sorting will be applied afterward.
00022 // .SECTION Implementation note: Although 99% of the time the Zspacing as read
00023 // from a tag in a 2D DICOM file should be correct, there has been reports that this
00024 // value can be missing, or incorrect, in which case users are advised to override this
00025 // value using the return value from gdcm::IPPSorter::GetZSpacing() and set it via
00026 // vtkImageChangeInformation on the reader itself.
00027 // .SECTION TODO
00028 // This reader does not handle a series of 3D images, only a single 3D (multi frame) or a
00029 // list of 2D files are supported for now.
00030 // .SECTION TODO
00031 // Did not implement SetFilePattern / SetFilePrefix API, move it to protected section for now.
00032 // .SECTION BUG
00033 // Overlay are assumed to have the same extent as image. Right now if overlay origin is not
00034 // 0,0 the overlay will have an offset...
00035 // Only the very first overlay is loaded at the VTK level, for now (even if there are more than one in the
00036 // file)
00037 // .SECTION DataOrigin
00038 // When the reader is instantiated with FileLowerLeftOn the DataOrigin and Image Position (Patient) are
00039 // identical. But when FileLowerLeft is Off, we have to reorder the Y-line of the image, and thus the
00040 // DataOrigin
00041 // is then translated to the other side of the image.
00042 // .SECTION Spacing
00043 // When reading a 3D volume, the spacing along the Z dimension might be negative (so as to respect
00044 // up-side-down)
00045 // as specified in the Image Orientation (Patient) tag. When Z-spacing is 0, this means the multi-frame
00046 // object
00047 // contains image which do not represent uniform volume.
00048 // .SECTION Warning
00049 // When using vtkGDCMPolyDataReader in conjunction with vtkGDCMImageReader2
00050 // it is *required* that FileLowerLeft is set to ON as coordinate system
00051 // would be inconsistent in between the two data structures.
00052 // .SECTION Color Space mapping:
00053 // * VTK_LUMINANCE <-> MONOCHROME2
00054 // * VTK_LUMINANCE_ALPHA <-> Not supported
00055 // * VTK_RGB <-> RGB
00056 // * VTK_RGBA <-> ARGB (deprecated, DICOM 2008)
00057 // * VTK_INVERSE_LUMINANCE <-> MONOCHROME1
00058 // * VTK_LOOKUP_TABLE <-> PALETTE COLOR
00059 // * VTK_YBR <-> YBR_FULL
00060 //
00061 // For detailed information on color space transformation and true lossless transformation see:
00062 // http://gdcm.sourceforge.net/wiki/index.php/Color_Space_Transformations

00014 // .NAME vtkGDCMImageWriter - write DICOM files
00015 // .SECTION Description
00016 // vtkGDCMImageWriter is a sink object that write DICOM files
00017 // this writer is single threaded (see vtkGDCMThreadedImageReader2 for multi-thread)
00018 //
00019 // .SECTION Warning: vtkLookupTable from the vtkImageData object taken into account
00020 // only if ImageFormat is set to VTK_LOOKUP_TABLE
00021 //
00022 // .SECTION NOTE We are not using the usual API SetFilePrefix / SetFilePattern,
00023 // but instead a list of filenames: see SetFileNames and class gdcm::FilenameGenerator
00024 //
00025 // .SECTION Warning
00026 // You need to specify the correct ImageFormat (taken from the reader)
00027 // You need to explicitly specify the DirectionCosines (taken from the reader)
00028 // Since VTK 5.4 vtkMedicalImageProperties has its own DirectionCosine (no 's')
00029 // user need to make sure the vtkMatrix4x4 is compatible with the 6-vector DirectionCosine.
00030 //
00031 // .SECTION NOTE Shift/Scale are global to all DICOM frames (=files) written
00032 // as 2D slice, therefore the shift/scale operation might not be optimized for
00033 // all slices. This is not recommended for image with a large dynamic range.
00034 //

00014 // .NAME vtkGDCMThreadedImageReader2 - read DICOM files with multiple threads
00015 // .SECTION Description
00016 // vtkGDCMThreadedImageReader2 is a source object that reads some DICOM files
00017 // This reader is threaded. Meaning that on a multiple core CPU with N cpu, it will
00018 // read approx N times faster than when reading in a single thread assuming the IO is
00019 // not a bottleneck operation.
00020 // If looking for a single threaded class see: vtkGDCMImageReader
00021 //
00022 // .SECTION Warning: Advanced users only. Do not use this class in the general case,
00023 // you have to understand how physically medium works first (sequential reading for
00024 // instance) before playing with this class
00025 //
00026 // .SECTION Implementation note: when FileLowerLeft is set to on the image is not flipped
00027 // upside down as VTK would expect, use this option only if you know what you are doing
00028 //
00029 // .SECTION FIXME: need to implement the other mode where FileLowerLeft is set to OFF
00030 //

```

```

00031 // .SECTION FIXME: need to implement reading of series of 3D files
00032 //
00033 // .SECTION Implementation note: this class is meant to supersede vtkGDCMThreadedImageReader
00034 // because it had support for ProgressEvent support even from python layer. There is a
00035 // subtle trick down in the threading mechanism in VTK were the main thread (talking to the
00036 // python interpreter) is also part of the execution process (and the N-1 other thread
00037 // are just there to execute the remaining of ThreadedRequestData), this separation into
00038 // two types of thread is necessary to achieve a working implementation of UpdateProgress
00039

00014      // .NAME vtkImageColorViewer - Display a 2D image.
00015      // .SECTION Description
00016      // vtkImageColorViewer is a convenience class for displaying a 2D image. It
00017      // packages up the functionality found in vtkRenderWindow, vtkRenderer,
00018      // vtkImageActor and vtkImageMapToWindowLevelColors into a single easy to use
00019      // class. This class also creates an image interactor style
00020      // (vtkInteractorStyleImage) that allows zooming and panning of images, and
00021      // supports interactive window/level operations on the image. Note that
00022      // vtkImageColorViewer is simply a wrapper around these classes.
00023      //
00024      // vtkImageColorViewer uses the 3D rendering and texture mapping engine
00025      // to draw an image on a plane. This allows for rapid rendering,
00026      // zooming, and panning. The image is placed in the 3D scene at a
00027      // depth based on the z-coordinate of the particular image slice. Each
00028      // call to SetSlice() changes the image data (slice) displayed AND
00029      // changes the depth of the displayed slice in the 3D scene. This can
00030      // be controlled by the AutoAdjustCameraClippingRange ivar of the
00031      // InteractorStyle member.
00032      //
00033      // It is possible to mix images and geometry, using the methods:
00034      //
00035      // viewer->SetInput( myImage );
00036      // viewer->GetRenderer()->AddActor( myActor );
00037      //
00038      // This can be used to annotate an image with a PolyData of "edges" or
00039      // or highlight sections of an image or display a 3D isosurface
00040      // with a slice from the volume, etc. Any portions of your geometry
00041      // that are in front of the displayed slice will be visible; any
00042      // portions of your geometry that are behind the displayed slice will
00043      // be obscured. A more general framework (with respect to viewing
00044      // direction) for achieving this effect is provided by the
00045      // vtkImagePlaneWidget .
00046      //
00047      // Note that pressing 'r' will reset the window/level and pressing
00048      // shift+'r' or control+'r' will reset the camera.
00049      //

/*
* Description:
*
* Assume we have a file angiogram-06.dcm as described above.
* the following program will decompress directly from the extracted jpeg stream.
*
* First step extract the jpeg stream (but not the Basic Offset Table):
*
* $ gdcmrw -i angiogram-06.dcm -o /tmp/output/chris --split-frags --pattern %d.jpg
*
* Check that indeed there are 355 files, while there are 356 fragments in the original DICOM file, since
* gdcmrw always skip the first fragment (Basic Offset Table).
*
* Now from those individual jpeg stream, recreate a fake gdcm.DataElement...
*
* Usage:
*
* $ export LD_LIBRARY_PATH=$HOME/Projects/gdcm/debug-gcc/bin
* $ mono ./bin/DecompressImageMultiframe.exe /tmp/output
*/

```

Question:

1. There is no restriction for a specific Private Creator Data Element (PCDE) to be unique within the same group, right ?

Decoders of Private Data would have to handle the case where a PCDE would be repeated and should NOT stop on the first instance of a particular PCDE, right ?

Eg. when searching for the tag associated with (0x0029,0x0010,"SIEMENS CSA HEADER") in the following (pseudo) dataset:

```
(0029,0010) LO [SIEMENS CSA HEADER] # 18, 1
PrivateCreator
(0029,0011) LO [SIEMENS MEDCOM HEADER] # 22, 1
PrivateCreator
(0029,0012) LO [SIEMENS MEDCOM HEADER2] # 22, 1
PrivateCreator
(0029,0013) LO [SIEMENS CSA HEADER] # 18, 1
PrivateCreator
(0029,1008) CS [IMAGE NUM 4] # 12, 1
CSAImageHeaderType
(0029,1009) LO [20050723] # 8, 1
CSAImageHeaderVersion
(0029,1010) OB 53\56\31\30\04\03\02\01\38\00\00\00\4d
\00\00\00\45\63\68\6f\4c\69... # 6788, 1 CSAImageHeaderInfo
(0029,1018) CS [MR] # 2, 1
CSASeriesHeaderType
(0029,1019) LO [20050723] # 8, 1
CSASeriesHeaderVersion
(0029,1020) OB 53\56\31\30\04\03\02\01\2c\00\00\00\4d
\00\00\00\55\73\65\64\50\61... # 51520, 1 CSASeriesHeaderInfo
(0029,1131) LO [4.0.163088300] # 14, 1
PMTFInformation1
(0029,1132) UL 32768 # 4, 1
PMTFInformation2
(0029,1133) UL 0 # 4, 1
PMTFInformation3
(0029,1134) CS [DB TO DICOM] # 12, 1
PMTFInformation4
(0029,1260) ?? 63\6f\6d\20 # 4, 1
Unknown Tag & Data
(0029,1310) OB 53\56\31\30\04\03\02\01\38\00\00\00\4d
\00\00\00\45\63\68\6f\4c\69... # 6788, 1 CSAImageHeaderInfo
```

one should return two instances, correct ?

Answer:

I would say that this is covered in principle by the PS 3.5 7.1 "The Data Elements ... shall occur at most once in a Data Set" rule, since the data element is defined by the tuple (private creator,gggg,ee) where xxee is the element number and xx is arbitrary and has no inherent meaning and does not serve to disambiguate the data element.

E.g.:

```
(0019,0030) Private Creator ID = "Smith"
...
(0019,0032) Private Creator ID = "Smith"
...
(0019,3015) Fractal Index = "32"
...
(0019,3215) Fractal Index = "32"
```

would be illegal because even though they are assigned different (completely arbitrary) blocks, with the same group, element number and private creator, (0019,3015) and (0019,3215) are the "same" data element.

*/

```
int main(int argc, char *argv[])
{
    if( argc < 3 )
    {
        std::cerr << argv[0] << " input.dcm output.dcm" << std::endl;
        return 1;
    }
    const char *filename = argv[1];
    const char *outfilename = argv[2];
```

```

gdcM::Reader reader;
reader.SetFileName( filename );
if( !reader.Read() )
{
    return 1;
}

gdcM::File &file = reader.GetFile();
gdcM::DataSet &ds = file.GetDataSet();

// Let's get all private element from group 0x9:
/*

/*
 * This example is a little helper to detect the famous SIEMENS JPEG lossless compressed image
 * where DICOM is declared as:
 *
 * (0028,0100) US 16                                     # 2,1 Bits Allocated

```

```

* (0028,0101) US 12 # 2,1 Bits Stored
* (0028,0102) US 11 # 2,1 High Bit
* (0028,0103) US 0 # 2,1 Pixel Representation
*
* But where JPEG is:
*
*     JPEG_SOF_Parameters:
*         SamplePrecision = 16
*         nLines = 192
*         nSamplesPerLine = 192
*         nComponentsInFrame = 1
*         component 0
*             ComponentIdentifier = 1
*             HorizontalSamplingFactor = 1
*             VerticalSamplingFactor = 1
*             QuantizationTableDestinationSelector = 0
*
* This case is valid. One simply has to use the 16bits jpeg decoder to decode the 12bits stored image.
* This used to be an issue in GDCM 1.2.x (fixed in GDCM 1.2.5)
*
* The main return 0 (no error) when the file read is actually a potential problem. At the end of the main
* function, the jpeg stream is stored in the filename specified as second argument
*/

/*
 * Simple example to show how to use Scanner API.
 * It exposes the three different cases:
 * - DICOM Attribute is present and has a value
 * - DICOM Attribute is present and has no value
 * - DICOM Attribute is not present at all
 * It also shows the purpose of the function 'IsKey' to detect whether or
 * not the file has been read by the gdcm::Scanner. Technically most of the time
 * if a file is not a 'Key' this is because it is not a DICOM file. You need to use
 * gdcm::System::FileExists to decide whether or not the file actually exist on the disk.
 *
 * It was tested on this particular image:
 * ./SimpleScanner gdcmData/012345.002.050.dcm
